

December 7, 2022

The Honorable Rosa L. DeLauro
Chair
Committee on Appropriations
U.S. House of Representatives
Capitol H-307
Washington, DC 20515

The Honorable Chellie Pingree
Chair
Subcommittee on Interior, Environment, and
Related Agencies
2007 Rayburn House Office Building
Washington, DC 20515

The Honorable Kay Granger
Ranking Member
Committee on Appropriations
U.S. House of Representatives
1036 Longworth House Office Building
Washington, DC 20515

The Honorable David Joyce
Ranking Member
Subcommittee on Interior, Environment, and
Related Agencies
1016 Longworth House Office Building
Washington, DC 20515

Re: Section 432 of the FY23 Interior, Environment and Related Agencies Appropriations Bill
("Policies Relating to Biomass Energy")

Dear Chairwoman DeLauro, Ranking Member Granger, Chairwoman Pingree, and Ranking
Member Joyce:

On behalf of more than 100 local, state, and national organizations, representing millions of
Americans who strongly support protecting our air, land, water, climate, and biodiversity, we
urge you to exclude environmental "poison pill" policy riders from the final FY 2023
appropriations legislation. While we commend the House and Senate for removing many of the
longstanding environmental riders from their respective Interior & Environment appropriations
bills, we ask that you exclude all the anti-environmental legacy riders from the final
appropriations package and refrain from adding new ones.

Specifically, we have concerns with Congress once again including a rider entitled "Policies
Relating to Biomass Energy" that directs federal agencies to treat forest biomass energy as
"carbon neutral" and "renewable." Every year since 2016, this rider has been included in the
final enacted appropriations package, even when the House has omitted this language from its
own appropriations bill, or as happened last year, both chambers had passed bills with amended
language. It is scientifically indefensible to characterize forest biomass energy as "carbon
neutral" and inappropriate for Congress to legislate the science of biomass and climate change.

Multiple credible and deliberative scientific bodies in the US and internationally, including the
IPCC and the EPA's own Science Advisory Board, have rejected the notion that burning wood
for energy is categorically carbon neutral. On the contrary, the science has continued to mount
that promoting forest biomass for energy can have significant damaging impacts on the climate

and our native forest ecosystems. Far from being instantaneously renewable, like wind and solar, it takes decades to centuries for trees to reach maturity. Additionally, we are concerned that facilities where forest bioenergy feedstocks are processed or utilized disproportionately burden low-income communities and communities of color with harmful air pollution and other environmental hazards.

While we appreciate that both the House and the Senate amended the language in their respective bills this year to remove the objectionable “carbon neutrality” language, we believe that the new language is still problematic. Directing federal agencies to establish policies that reflect the “carbon benefits” of forest biomass energy amounts to a continuation of Congressional interference with federal agencies’ scientific process. We therefore urge you to remove the biomass energy provision altogether (Section 432 of the Interior & Environment appropriations bill).

In addition, our groups strongly oppose Senator Manchin’s dirty permitting deal and urge you not to attach this to the final appropriations bill or any other “must-pass” legislation that Congress takes up this year. In addition to fast-tracking fossil fuel infrastructure, stifling community engagement, and undermining bedrock environmental laws such as the National Environmental Policy Act, this proposal could also fast-track large-scale biomass power projects, to the detriment of frontline communities who continue to bear the brunt of harm from polluting energy facilities.

In the coming weeks, Congress has an opportunity to pass a clean budget that contains no harmful or extraneous policy riders. We appreciate the progress the Committees have made this year and urge lawmakers to keep anti-environmental provisions out of the FY 2023 omnibus entirely, whether they are new this year or carried forward from previous appropriations bills.

Sincerely,
